

PROJECT 02

OSINT Investigation & Intelligence Gathering

*Public Data, Private Conclusions -
The Art of Open Source Intelligence*

Professional Intelligence Report

 **TARGET WEBSITE**

 <https://www.chicken-road2.app/>

 Project Type	Open Source Intelligence (OSINT)
 Investigation Method	Passive Intelligence Gathering
 Target Domain	chicken-road2.app
 Submission Date	28 July 2026

CYBERSECURITY INTERNSHIP PROGRAM

TABLE OF CONTENTS

Section	Page No
Executive Summary	4
Target Overview	5
Website Investigation	6
3.1 Domain Information	
3.2 WHOIS Details	
3.3 IP Address Information	
3.4 DNS Records	
3.5 Hosting Provider	
3.6 SSL Certificate Information	
3.7 Security Header	
3.8 Technologies Used	
3.9 Subdomains	
3.10 robots.txt	
3.11 sitemap.xml	
3.12 Other Public Information	
Source Documentation	19

Intelligence Analysis	20
Recommendations	24
References	24
Appendix	26

1.Executive Summary

This report presents the findings of a passive Open Source Intelligence (OSINT) investigation conducted on the target website <https://www.chicken-road2.app/>. The objective of the investigation was to gather publicly available information related to the website's infrastructure, domain registration, DNS configuration, hosting environment, SSL/TLS implementation, security headers, technologies used, and other accessible

resources.

The investigation was performed using trusted OSINT tools and publicly available sources without interacting with or affecting the target system. The collected information indicates that the website utilizes modern web technologies and Cloudflare services for DNS management and content delivery.

Overall, the investigation demonstrates how publicly available information can provide valuable insights into a target's online infrastructure while highlighting the importance of implementing security best practices to strengthen the website's overall security posture.

2.Target Overview

2.1 Investigation Objective

The objective of this investigation was to perform an Open Source Investigation (OSINT) assessment on the target website (<https://www.chicken-road2.app/>) using only publicly available information. The investigation aimed to gather relevant intelligence about the target's online presence, infrastructure, technologies, security posture, and publicly exposed information without interacting with or affecting the target system.

2.2 Investigation Scope

Scope

This investigation was limited to passive information gathering techniques. Only publicly accessible information obtained through trusted OSINT tools and websites was used. No vulnerability exploitation, authentication bypass, scanning that could impact the target, or unauthorized access attempts were performed during the investigation.

2.3 Target Details

FIELD	VALUE
Target Website	https://www.chicken-road2.app/
Target Domain	chicken-road2.app
Top-Level Domain	.app
Protocol	HTTPS
Investigation Type	Passive Open Source Intelligence (OSINT)
Investigation Method	Publicly Available Information Gathering
Target Status	Publicly Accessible Website

2.4 Investigation Methodology

Methodology

The investigation followed a structured passive OSINT approach by collecting publicly available information from multiple trusted sources. The collected data included domain registration details, DNS records, IP address information, hosting provider details, SSL certificate information, security headers, technologies used, publicly available subdomains, robots.txt, sitemap.xml, and other accessible information. Each finding was documented together with the corresponding source and tool used to ensure traceability and reliability.

3. Website Investigation

3.1 Domain Information

Overview

Domain Information provides the basic identification details of a website, including its domain name, top-level domain (TLD), communication protocol, and domain status. It serves as the foundation of an OSINT investigation by establishing the target's identity before conducting further technical analysis.

Purpose of Investigation

The domain information was examined to:

- Identify the target website and domain.
- Verify the website's publicly accessible URL.
- Determine the communication protocol used by the website.
- Identify the top-level domain (TLD).
- Establish the basic domain information for further investigation.

Findings

Field	Value
Target Domain	chicken-road2.app
Website URL	https://www.chicken-road2.app/
Top-Level Domain (TLD)	.app
Protocol	HTTPS
Domain Status	clientTransferProhibited

Tools Used : WHOIS

Source URL : <https://who.is/> , <https://www.whois.com/>

3.2 WHOIS Details

Overview

WHOIS is a publicly accessible database that stores domain registration information. It provides details such as the domain registrar, registration and expiration dates, name servers, domain status, and other administrative information. During an OSINT investigation, WHOIS data helps verify the legitimacy and lifecycle of a domain.

Purpose of Investigation

The WHOIS information was examined to:

- Identify the domain registrar.
- Verify the domain registration and expiration dates.
- Determine the domain's current status.
- Identify the authoritative name servers.
- Understand the domain's registration history.

Prepared By Samyuktha S

Findings

Field	Value
Registrar	Key-Systems LLC
Creation Date	13 May 2025
Last Updated Date	04 May 2026
Expiry Date	13 May 2027
Name Servers	autumn.ns.cloudflare.com , denver.ns.cloudflare.com
Country	GB
Domain Status	Active

Tools Used : [WHO.IS](https://who.is) RDAP

Source URL : <https://who.is/rdap/chicken-road2.app>

3.3 IP Address Information

Overview

An IP (Internet Protocol) address is a unique numerical identifier assigned to a device or server connected to the internet. During an OSINT investigation, IP address information helps identify the hosting network, Autonomous System Number (ASN), approximate geolocation, and service provider associated with the target website.

Purpose of Investigation

The IP address information was examined to:

- Identify the public IP address associated with the target domain.
- Determine the hosting network and Autonomous System Number (ASN).
- Identify the hosting provider.
- Obtain publicly available geolocation information.
- Understand the network infrastructure supporting the website.

Prepared By Samyuktha S

Findings

Field	Value
IPv4 Address	104.21.38.193
IPv4 Address	172.67.137.239
IPv6 Address	2606:4700:3030::ac43:89ef , 2606:4700:3034::6815:2621
Autonomous System (ASN)	AS13335
ASN Name	Cloudflare, Inc.
Hosting Provider	Cloudflare, Inc.
Network Type	Hosting / CDN
Approximate Location	San Francisco, California, United States

Tools Used : MXToolbox, IPinfo

Source URL : <https://mxtoolbox.com/> , <https://ipinfo.io/>

3.4 DNS Records

Overview

The Domain Name System (DNS) translates a domain name into IP addresses, enabling users to access websites using human-readable names instead of numerical IP addresses. DNS records also provide information about email configuration, domain verification, name servers, and other services associated with a domain.

Purpose of Investigation

The DNS Records were examined to:

- Identify the IP addresses associated with the target domain.
- Verify the configured name servers.
- Identify the email-related DNS records.
- Identify domain verification records.
- Understand the domain's DNS configuration.

Findings

Record Type	Value
A Record	104.21.38.193 , 172.67.137.239
AAAA Record	2606:4700:3030::ac43:89ef , 2606:4700:3034::6815:2621
MX Record	No MX Record Found
NS Record	autumn.ns.cloudflare.com , denver.ns.cloudflare.com
TXT Record	google-site-verification=0wvvhA6b5wO4XvHwi25O0BDtvDU1zxYWWnF4yNXsZsFk
CNAME Record	No Record Found

Tools Used : MXToolbox

Source URL : <https://mxtoolbox.com>

3.5 Hosting Provider

Overview

A hosting provider is the organization responsible for delivering a website's content and services over the internet. Identifying the host provider helps determine where the website's traffic is managed and provides insight into the infrastructure supporting the target website.

Prepared By Samyuktha S

Purpose of Investigation

The hosting provider was examined to:

- Identify the organization providing network services for the website.
- Determine the hosting infrastructure used by the target.
- Identify the Autonomous System Number (ASN).
- Understand the publicly visible hosting environment.

Findings

Field	Value
Hosting Provider	Cloudflare, Inc.
ASN	AS13335
ASN Type	Hosting
Service Type	Content Delivery Network (CDN) and Reverse Proxy
Network Range	104.21.32.0/20
Approximate Hosting Location	San Francisco, California, United States

Tools Used : IPinfo

Source URL : <https://ipinfo.io/>

3.6 SSL Certificate Information

Overview

An SSL/TLS certificate is a digital certificate that encrypts communication between a user's browser and a website. It authenticates the website's identity and helps ensure the confidentiality and integrity of data transmitted over the network.

Prepared By Samyuktha S

Purpose of Investigation

The SSL certificate information was examined to:

- Verify that the website uses HTTPS encryption.
- Identify the certificate issuer.
- Check the certificate validity period.
- Verify the certificate's trust status.
- Review publicly available certificate details.

Findings

Field	Value
Common Name (CN)	chicken-road2.app
Alternative Names (SAN)	chicken-road2.app , *.chicken-road2.app
Certificate Issuer	Google Trust Services (WE1)
Signature Algorithm	SHA256withECDSA
Key Type	EC 256-bit
Valid From	05 July 2026
Valid Until	03 October 2026
Certificate Transparency	Enabled
Revocation Status	Good (Not Revoked)
Trusted	Yes
Extended Validation (EV)	No

Tools Used : SSL Labs (SSL Server Test)

Source URL : <https://www.ssllabs.com/ssltest/>

Prepared By Samyuktha S

3.7 Security Headers

Overview

HTTP security headers are additional response headers sent by a web server to instruct web browsers on how to securely handle website content. They help protect web applications against common attacks such as Cross-Site Scripting (XSS), clickjacking, MIME-type sniffing, and information leakage.

Purpose of Investigation

The security headers were examined to:

- Identify the HTTP security headers implemented by the website.
- Assess whether recommended security headers are configured.
- Identify missing security headers that could impact the website's security posture.
- Evaluate the website's publicly visible security configuration.

Findings

Header	Status
Strict-Transport-Security (HSTS)	Present
Content-Security-Policy	Missing
X-Frame-Options	Missing
X-Content-Type-Options	Missing
Referrer-Policy	Missing
Permissions-Policy	Missing

Tools Used : [SecurityHeaders.com](https://securityheaders.com/)

Source URL : <https://securityheaders.com/>

Prepared By Samyuktha S

3.8 Technologies Used

Overview

Identifying the technologies used by a website helps determine the software, frameworks, services, and infrastructure that power the application. This information provides insight into the website's architecture and publicly visible technology stack.

Purpose of Investigation

The technologies used by the website were examined to:

- Identify the web frameworks and programming technologies.
- Determine the hosting and deployment platform.
- Identify content delivery and performance optimization services.
- Discover publicly visible third-party technologies integrated into the website.

Findings

Technology Category	Technology Identified
Static Site Generator	Next.js (16.1.6)
Web Framework	Next.js (16.1.16)
Web Server	Next.js (16.1.16)
Javascript Framework	React
Platform as a Service	Vercel
Content Delivery Network (CDN)	Cloudflare, Cloudinary, jsDelivr
Performance Optimization	Cloudflare Rocket Loader, Priority Hints
Digital Asset Management	Cloudinary
Analytics / RUM	Cloudflare Browser Insights
Miscellaneous	HTTP/3, Open Graph, Progressive Web App (PWA)

Prepared By Samyuktha S

Tools Used : Wappalyzer

Source URL : <https://www.wappalyzer.com/>

3.9 Subdomains

Overview

Subdomains are subdivisions of a primary domain that are used to organize or provide access to different services or sections of a website. Identifying publicly available subdomains during an OSINT investigation helps understand the target's exposed infrastructure and discover additional publicly accessible resources.

Purpose of Investigation

The subdomains were examined to:

- Identify publicly accessible subdomains associated with the target domain.
- Discover additional services hosted under the target domain.
- Understand the publicly visible domain structure.
- Identify any additional entry points exposed through DNS records.

Findings

Subdomain	Status / Description
www.chicken-road2.app	Publicly accessible website
Additional Public Subdomains	No additional publicly discoverable subdomains identified during the investigation.

Tools Used : DNSDumpster, crt.sh (Certificate Transparency Logs)

Source URL: <https://dnsdumpster.com/> , <https://crt.sh/>

Prepared By Samyuktha S

3.10 robots.txt

Overview

The robots.txt file is a publicly accessible text file located in the root directory of a website. It provides instructions to web crawlers and search engine bots regarding which parts of the website may or may not be accessed for indexing. During an OSINT investigation, the robots.txt file may reveal publicly disclosed directories, restricted paths, and the location of the website's sitemap.

Purpose of Investigation

The robots.txt file was examined to:

- Identify directories that are restricted from web crawlers.
- Discover publicly available paths and resources.
- Locate the website's sitemap.
- Understand the website's crawling and indexing policy.

Findings

Directive	Value
Default User-Agent	* (All web crawlers)
Allowed Path	/
Disallowed Paths	/api/* , /go/* , /pages/condition-utilisation
Blocked Crawlers	AhrefsBot, SemrushBot, DotBot, Screaming Frog SEO Spider, Chatgpt-User
Sitemap Location	https://www.chicken-road2.app/sitemap.xml

Tools Used : Web Browser

Source URL : <https://www.chicken-road2.app/robots.txt>

Prepared By Samyuktha S

3.11 sitemap.xml

Overview

A sitemap.xml file is an XML document that lists the publicly accessible pages of a website. It is primarily used to help search engines discover and index website content efficiently. During an OSINT investigation, a sitemap can provide insight into the website's publicly exposed pages and overall site structure.

Purpose of Investigation

The sitemap.xml file was examined to:

- Identify publicly accessible web pages.
- Understand the website's structure.
- Verify that a sitemap is available.
- Identify the last modification date of the published content.

Findings

Field	Value
Sitemap URL	https://www.chicken-road2.app/sitemap.xml
Status	Accessible
Number of URLs Listed	1
Indexed URL	https://www.chicken-road2.app
Last Modified	24 July 2026 (2026-07-24T09:08:08:270Z)

Tools Used : Web Browser

Source URL : <https://www.chicken-road2.app/sitemap.xml>

Prepared By Samyuktha S

3.12 Other Publicly Available Information

Overview

In addition to technical information, publicly accessible website resources such as the Terms of Service, Privacy Policy, and contact information can provide valuable intelligence about the website's operations, transparency, and publicly disclosed information. These resources help build a more complete understanding of the target during an OSINT investigation.

Purpose of Investigation

The publicly available information was examined to:

- Identify legal and policy-related pages.
- Verify the availability of contact information.
- Identify additional publicly disclosed information about the website.
- Complete the passive OSINT investigation using publicly accessible resources.

Findings

Information	Status / Value
Terms of Service	Available
Privacy Policy	Available
Contact Email	contact@www.chicken-road2.app
Website Accessibility	Publicly Accessible
Public Legal Information	Available through the website

Tool Used : Web Browser

Source URL : <https://www.chicken-road2.app/>

Prepared By Samyuktha S

4. Source Documentation

Overview

This section documents the sources used during the OSINT investigation. Each finding is mapped to the corresponding OSINT tool or website along with the exact source URL to ensure transparency, traceability, and verification of the collected information.

Source Documentation Table

Information Collected	Tool / Website Used	Source URL
Domain Information	WHO.IS	https://who.is/
WHOIS Details	WHO.IS (RDAP)	https://who.is/rdap/chicken-road2.app
DNS Record	MXToolbox	https://mxtoolbox.com/
IP Address Information	IPinfo	https://ipinfo.io/
Hosting Provider	IPinfo	https://ipinfo.io/
SSL Certificate Information	SSL Labs	https://www.ssllabs.com/ssltest/
Security Header	SecurityHeaders.com	https://securityheaders.com/
Technologies Used	Wappalyzer	https://www.wappalyzer.com

Certificate Transparency Logs	crt.sh	https://crt.sh/
robots.txt	Web Browser	https://www.chicken-road2.app/sitemap.xml
sitemap.xml	Web Browser	https://www.chicken-road2.app/sitemap.xml
Public Website Information	Web Browser	https://www.chicken-road2.app/

Prepared By Samyuktha S

5. Intelligence Analysis

Overview

The collected OSINT data was analyzed to identify potential security observations, assess the target's publicly visible security posture, and determine whether any publicly available information could introduce security risks. The analysis presented in this section is based solely on information gathering during the passive investigation.

5.1 Domain Registration Status

Finding

The domain is registered with **Key-Systems LLC** and remains **valid until 13 May 2027**. The domain status is **clientTransferProhibited**.

Analysis

The domain is actively maintained and protected against unauthorized registrar transfers through the **clientTransferProhibited** status. This reduces the risk of domain hijacking through unauthorized transfer requests.

Security Impact

This is considered a positive security practice, as it helps protect the ownership of the domain.

5.2 DNS Configuration

Finding

The domain uses Cloudflare name servers and resolves to two public IPv4 addresses. No MX record was identified, while a TXT record for Google site verification is present.

Analysis

Cloudflare-managed DNS indicates that the website relies on Cloudflare's infrastructure for DNS resolution. The absence of an MX record suggests that the domain may not currently be configured to receive email. The TXT record appears to be used for domain ownership verification.

Security Impact

The DNS configuration does not expose sensitive information. The lack of an MX record may reduce exposure to email-related attacks if the domain does not provide email services.

5.3 Hosting Infrastructure

Findings

The website is publicly served through Cloudflare (AS13335).

Analysis

Cloudflare acts as a Content Delivery Network (CDN) and reverse proxy, helping protect the origin infrastructure while improving website performance and availability.

Security Impact

Using Cloudflare enhances security by providing protection against threats such as DDoS attacks and by masking the origin server from direct public access.

5.4 SSL/TLS Configuration

Finding

The website uses a trusted SSL/TLS certificate issued by **Google Trust Services (WE1)**.

Analysis

The certificate is valid, trusted, and supports encrypted HTTPS communication between clients and the website.

Security Impact

A valid SSL certificate helps ensure data confidentiality, integrity, and user trust by encrypting network traffic.

5.5 Security Headers

Finding

Several recommended HTTP security headers were not present, including:

- Content-Security-Policy (CSP)
- X-Frame-Options
- X-Content-Type-Options
- Referrer-Policy
- Permissions-Policy

Analysis

These headers provide additional protection against common web-based attacks and improve browser security behavior. Their absence indicates opportunities to strengthen the website's security configuration.

Security Impact

Missing security headers may increase exposure to attacks such as Cross-Site Scripting (XSS), clickjacking, MIME-type sniffing, and unintended information disclosure.

5.6 Technology Stack

Finding

The website uses [Next.js](#) , React , Vercel , Cloudflare , Cloudinary, and jsDelivr.

Analysis

The identified technologies indicate that the website is built using a modern web development stack and leverages cloud-based services for hosting, content delivery, and performance optimization.

Security Impact

Modern frameworks are generally well-supported; however, they should be kept up to date to reduce the risk of vulnerabilities associated with outdated software versions.

5.7 Publicly Accessible Files

Finding

The robots.txt file defines crawler permissions and references the sitemap file. The sitemap contains one publicly indexed URL, suggesting a relatively simple website structure.

Analysis

The robots.txt file defines crawler permissions and references the sitemap.xml file. The sitemap contains one publicly indexed URL , suggesting a relatively simple website structure.

Security Impact

No sensitive directories or confidential resources were exposed through the publicly available robots.txt or sitemap.xml files during the investigation.

6. Recommendations

Overview

Based on the findings obtained during the OSINT investigation, several recommendations can be made to improve the target website's publicly visible security posture. These recommendations are intended to reduce potential security risks and align the website with common security best practices.

6.1 Implement Missing Security Headers

Recommendation:

Configure the missing HTTP security headers, including:

- Content-Security-Policy (CSP)
- X-Frame-Options
- X-Content-Type-Options
- Referrer-Policy
- Permissions-Policy

Reason:

These headers help protect against common web attacks such as Cross-Site Scripting (XSS), clickjacking, MIME-type sniffing, and information leakage.

6.2 Maintain SSL/TLS Certificates

Recommendation:

Continue renewing SSL/TLS certificates before expiration and use trusted Certificate Authorities (CAs).

Reason:

Maintaining valid certificates ensures secure encrypted communication and preserves user trust.

6.3 Regularly Monitor DNS Configuration

Recommendation:

Periodically review DNS records to ensure they remain accurate and remove any unnecessary or outdated records.

Reason:

Proper DNS management reduces the risk of misconfigurations and unintended exposure of services.

6.4 Keep Software and Frameworks Updated

Recommendation:

Regularly update web frameworks, libraries, and third-party services such as Next.js, React, and other supporting technologies.

Reason:

Keeping software up to date helps mitigate known vulnerabilities and improves overall security.

6.5 Perform Regular Security Assessments

Recommendation:

Conduct periodic security reviews, vulnerability assessments, and penetration testing to identify and remediate potential weaknesses.

Reason:

Regular assessments help maintain a strong security posture and identify issues before they can be exploited.
